

Drug Delivery from Benchtop to Patient – With Advanced Sterile Technology

Solutions for Challenging APIs
Broad Healthcare Product Capability
Complex Formulation Expertise
CDMO Experience
Faster to Market

Proven Excellence.
Trusted Solutions.

At the forefront of sterile delivery solutions for over 55 years

Woodstock Sterile Solutions is a leading global provider of best-in-class sterile development and manufacturing solutions – with a decades-long track record of helping healthcare companies advance molecules through clinical development into full-scale commercial production.

Throughout our history, Woodstock Sterile Solutions has been a leader in developing and deploying advanced aseptic blow-fill-seal delivery products for healthcare.

After more than 55 years, we're just getting started. We have completed an expansion of our QC analytical laboratory, doubling the size of our previous space, and building on our analytical expertise. We have enhanced our method and formulation process development capabilities to offer fully integrated drug development and manufacturing services. We have also continued to expand our blow-fill-seal capabilities. Working extensively with customers in the respiratory and ophthalmic markets for years, our BFS packaging offers a viable solution for healthcare companies in the diagnostics market as it helps to minimize the risk of human contamination, allows for precise filling and can be easily customized to meet specific needs for diagnostics customers. This is all part of our goal to serve as a premier one-stop shop CDMO for our customers.

The Woodstock Difference: Challenging APIs & Complex Formulations

Today, Woodstock Sterile Solutions is a reliable partner in the development of complex, high-quality sterile products from ophthalmic and respiratory therapeutics to diagnostics and complex orals. Our experience with formulation and the pharmaceutical development cycle is a core strength. Woodstock Sterile Solutions is at its best with complex solutions, suspensions, and emulsions, as well as biologics, sterile products, potent compounds, and sensitive APIs.

Contract Development & Manufacturing

In addition, Woodstock Sterile Solutions is one of the leading contract development and manufacturing (CDMO) providers for sterile liquid formulations. This strong manufacturing orientation ensures your products will be on target and on time.

The Journey to Sterile Solutions Excellence

Founded as Automatic Liquid Packaging (ALP)

Woodstock, IL manufacturing site established

First production runs of blow-fill-seal delivery systems

First production of complex sterile biologic using BFS

ALP purchased by Cardinal Health

Cardinal Health PTS Division purchased by Blackstone

Catalent Pharma Solutions created

Initiated development capabilities via lab buildout and expanded formulation expertise

Woodstock Sterile Solutions established as a standalone business

Expanded lab & analytical capabilities, creating a one-stop shop for customers

Proven Formulation Development

With decades of experience managing complex formulations, Woodstock Sterile Solutions has a track record of API stewardship, formulation optimization, effective clinical program support and seamless scale-up to commercial production – within stringent quality and regulatory environments. At each stage of the development process, we are committed to achieving the right quality - efficiently and with commercialization in mind.

Formulation

At Woodstock Sterile Solutions, our customers often come to us with just a molecule and an early formulation concept. Our experience with liquid formulations allows us to address challenges and make a robust, scalable product for clinicals that translates well for commercial manufacturing.

Clinical Supply

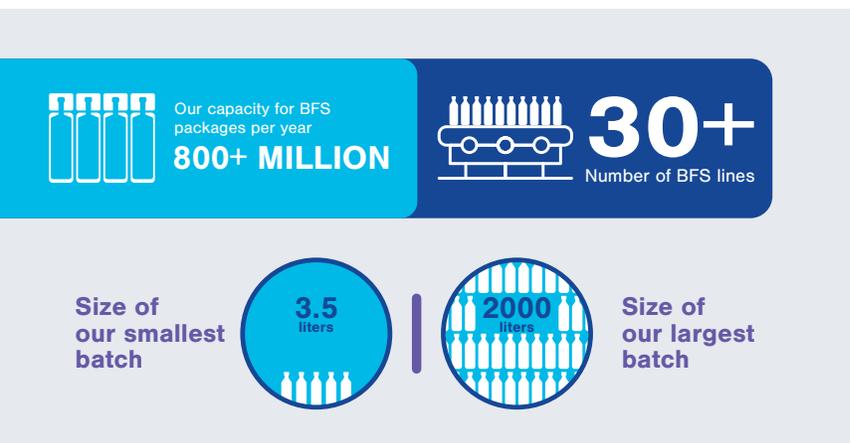

Woodstock is unique in the aseptic blow-fill-seal space in our ability to efficiently provide small-run prototypes using limited supplies of API material and then having the capabilities to seamlessly scale that to commercial production.

Manufacturing at Global Scale

Woodstock Sterile Solutions' manufacturing facility is one of the most comprehensive production environments supporting sterile and non-sterile liquid and semi-solid formulations in the world. We provide full-scale development to commercial solutions with customizable, specialty fill-finish solutions to ensure a reliable global supply.

Lifecycle Management

Woodstock Sterile Solutions looks to forge long-term partnerships with our customers – including managing the lifecycle of their therapeutic products.

Broad Registration, Accreditations and Certifications

- Registered for drug, device and food manufacturing with the U.S. Food and Drug Administration (FDA)
- State license for wholesale drug manufacturing and distribution licenses
- Certifications through EU-competent authorities
- Manufacturing accreditations for Japan, Australia, Canada and Brazil
- Potent material handling Safebridge® 1-4
- ISO 13485:2003 Certification

Quality and Reliability Driven by Healthcare Outcomes

At Woodstock Sterile Solutions, our goal is to be the best development partner in the industry, delivering the most challenging life-enhancing molecules from the benchtop to the patient. Quality is a passion at Woodstock Sterile Solutions in every phase of our business. It is foundational to our business and stems from our core belief that there is a child, a family member, or a friend, behind every dose. Therefore, it is imperative that we are right the first time and every time.

Respect for Our People, Our Neighbors, and the Environment

At Woodstock Sterile Solutions, we're part of the healthcare business – so the well-being of people – and the planet is part of our mission as a company. We employ best-in-class environmental and sustainability management programs at our manufacturing facilities.

Woodstock Sterile Solutions is committed to building and sustaining an organization that embraces diversity, continuously pursues equity, and fosters an inclusive environment.
